

FinanceWise × MarketWise Fusion Demo

Deterministic Financial Signal Evaluation – Public GitHub Demo

System: FinanceWise + MarketWise Fusion

Creator: Grounded DI (MSW)

License: Custom Attribution + Sealed Logic Protocol (Public Demo Mode)

Governance: All reasoning paths must produce identical outputs when rerun. Drift is prohibited.

ΔH: 0.03 (Zero-entropy drift logic enforcement)

Task 1 – Deterministic Valuation Comparison: Energy vs Biotech sectors were analyzed using scroll-anchored deterministic valuation formulas. Result: Energy sector shows stable yield anchors with tier-2 signal density, while biotech surfaced a volatile but high-frequency anomaly cluster, prompting further scroll audit.

Task 2 – Invisible Opportunity Detection: Scroll logic revealed an unindexed behavioral anomaly in small-cap logistics ETFs—a pattern not triggered by traditional indicators. This hidden pathway was mapped via passive metadata signal drift analysis.

Task 3 – Magic PDF-Compatible Insight: This report structure is designed to be sealed and exported into a tamper-resistant Magic PDF with embedded authorship trace and audit markers, compliant with DI2 logic standards.

Report Timestamp: August 15, 2025 – 10:43 PM
